

WHITMAN-WALKER CLINIC

Medical Services

Primary medical care with HIV/AIDS and LGBT specialty care is available at both the **Elizabeth Taylor Medical Center** in Northwest Washington and the **Max Robinson Center** in Anacostia. Our professional staff and numerous medical and clinical volunteers deliver high-quality care to the entire community along with culturally sensitive care for the LGBT communities.

All services are available to the Spanish-speaking community through bilingual staff and volunteers. Other translation services are available upon request.

- **Primary medical care**, including preventive health care, annual physical and gynecological exams, sick visits, chronic disease management, pregnancy tests and specialty consultations and referrals.
- **The HIV clinic** provides comprehensive medical evaluations, primary medical care and treatments for HIV disease and other illnesses.
- **Our dental unit** provides full dental services including cleaning, x-ray, diagnosis, treatment and assistance with nutritional planning.
- **Pre-natal and post-partum care** for low-risk pregnancies and referrals to obstetricians or perinatologists for high-risk pregnancies.
- **A pharmacy** where individuals may obtain medications at or below cost. In 2007, the pharmacy filled more than 25,000 prescriptions.
- **Gay/lesbian/bisexual health services** in a supportive and culturally sensitive environment. Services include mammography screenings, gynecological exams, sexually transmitted disease screenings, a full array of professional psychotherapy and counseling services, and crisis intervention.
- **Transgender health services** that include trans-affirmative gynecological exams, STD screening, and chest and breast exams, chest and breast self-exam instruction, testosterone therapy for female-to-male clients, including blood work and medical examinations, and hormone therapy for male-to-female individuals.
- **A clinical investigations unit** that provides cutting-edge medicine and treatments to Whitman-Walker Clinic patients at little or no cost through a variety of pharmaceutical investigations. The unit also plays an important role in research for effective treatments for HIV/AIDS.
